CitiusTech Announces registeR4Health™ - Patient Registration Solution on Microsoft HealthVault

registeR4Health is a simple and secure online solution for patient to complete the registration process prior to visiting a provider

Sarasota, FL — June 9, 2008 — CitiusTech – a leading provider of healthcare technology solutions – today announced that it has released registeR4Health – a simple and secure online solution for patients to complete the registration process prior to visiting a Provider. registeR4Health has been designed on Microsoft HealthVault, Microsoft’s consumer health platform, and provides patients the ability to store the registration information in HealthVault and reuse this information for subsequent visits to providers. registeR4Health is designed to integrate with hospital HIS and provider portals as well as ambulatory practice management systems.

“Registration has historically been a time-consuming and inefficient process for both patients and provider offices. registeR4Health enables us to solve the registration problem in a fundamentally new way using HealthVault’s secure storage and messaging capabilities,” said Bimal R. Naik, SVP Projects, CitiusTech Inc. “Once the patient and providers are connected using HealthVault, there are other interesting clinical and financial data exchange opportunities which we are developing at CitiusTech.”

“registeR4Health uses HealthVault to solve the first step in any patient-provider interaction – patient registration,” said David Cerino, general manager, Microsoft Health Solutions Group. “This solution helps establish the vital electronic link between the patient and provider, which will help us deliver on the promise of connecting and improving healthcare,”

More information on registeR4Health is available on the website – www.registeR4Health.com, by email (info@registeR4Health.com) or by phone +1 (877) CITIUS 1.
