**Summary:**

CitiusTech is seeking top-notch IT professionals with strong technical skills to build applications and products using modern architecture and technologies

**Duties:**

- Working with Product Managers, Designers and Frontend Engineers to conceptualize and build new features
- Participating in design reviews, code reviews and on-call rotations
- Participating in requirements analysis, project planning and providing time/cost estimates
- Understanding the current application infrastructure and re-building/refactoring using modern architectures
- Converting complex product initiatives into concrete software designs that can be implemented in an iterative and agile fashion
- Designing and executing migrations from current platform to the new architecture with minimal to zero downtime

**Requirements:**

- A bachelor's degree in computer science, computer engineering, computer applications or a related IT field.
- 2+ years of experience in the Information Technology field
- 2+ years' experience building applications using AWS, Python and Django
- Experience building SaaS applications using domain-driven, event-driven architectures
- Experience working with SRE engineers on application logging, monitoring, alerting and security
- A self-starter who can collaborate with other teams (inside and outside of development)
- Enthusiasm for learning, collaboration and mentorship
